

Moral Foundations Coding Protocol Summer 2018

The coding process consists of 4 steps that need to be done for each sentence and article as a whole:

A. For each sentence in the article¹ (if the article has a title, treat the title as a sentence too):

- (1) Identifying whether it contains a moral claim.
- (2) Identifying the kind of claim that is present.
- (3) Specifying whether the author agrees or disagrees with it.
- (4) Specifying whether the statement favors or opposes a relevant policy or a point of view. These will differ depending on the specific issue in question.

B. For the whole article:

Evaluate the entire article and specify what you regard is its main moral claim. Keep in mind that it may or may not be the most frequent one (based on counting sentences with moral claims).

Step 1 Identifying a Moral Claim

A moral claim is a statement that says something is right or wrong, good or bad. Sometimes the claim is about the rightness or wrongness of an act (cheating, rioting, being fair). Other times the claim is about something society should do (promoting safety, preserving the family). The claim need not be explicit. Sometimes we use language that implies a moral judgment, rather than stating it explicitly. To say that waterboarding is “barbaric” is to imply that it’s morally problematic. To say that a business was “looted” is to imply that goods were taken wrongfully, unjustly. Similarly, for undocumented immigrants, if the term used is “illegal” it implies a wrongful act that subverts authority and order. Moral claims are normative; they appeal to some norm or standard and tell us what the world ought to be like. Normative claims contrast with descriptive claims, which instead simply describe the way the world actually is.

When we think of morality we usually apply at the level of one’s individual behavior: “what’s the right thing for me to do?” When we think about it at the societal level, we apply it to the collective--“what’s the right thing for us to do?” Because such decisions are usually controversial—people rarely all agree on the right course of action—moral judgments are part of every political debate. And because they are based on conviction rather than reason, the debate is often uncompromising and emotional.

Let’s take stem cell research as an example. One common moral argument in favor of stem cell research is that the embryos needed for the stem cells will help lead to cures for diseases that cause widespread suffering. Another, opposed to stem cell research, says that because all life is sacred embryos cannot be sacrificed. The first argument is based on reducing harm, the second on protecting the sacredness--or purity--of life.

At the end of the codebook, you will find a set of common keywords associated with different types of moral claims. You can use the keywords as guidance to understand the moral frame

¹ The instructions in red were added for Stage 2 annotations. See [NUSE 2020](#) paper for details.

types but you do not need to use the keywords as the main determinant for the presence of a claim. A moral claim may contain none of the keywords listed at the end of this codebook, and the presence of a keyword does not necessarily indicate the presence of a moral claim. For example, the sentence, “The parents grieved the loss of their son” does not contain any of the keywords but it nevertheless conveys a moral claim of harm. On the other hand, the sentence “the group decided to leave the event,” contains a loyalty keyword (group) but clearly does not make a moral claim.

If you cannot make a definitive judgment about a sentence, leave it uncoded.

Step 2 Identifying the Kind of Moral Claim Being Made

There are five categories of moral claims, each with a vice and a virtue side. They can be identified by very different kinds of concerns.

1. Care/Harm: relates to the vulnerability of human beings. Examples of care terms include kindness, nurturing, protection, and safety. Harm terms include cruelty, neglect, exploitation, and killing.
2. Fairness/**Injustice**: relates to the equal application of rules or just allocation of benefits. Terms used to express the idea of fairness include justice, rights, tolerance, impartiality, and honesty. By contrast, terms used to express cheating include prejudice, discrimination, injustice, and exclusion.
3. Loyalty/Betrayal: relates to patriotism and self-sacrifice for the group. The loyalty side includes such terms as homeland, community, nation, family, and solidarity. Betrayal terms include foreign, immigrant, enemy, betrayal, and treason.
4. Authority/Subversion: applies to issues of clear lines of authority, in which the authority is respected and seen as legitimate. Examples of authority terms include honor, respect, tradition, control, and submission. Examples of subversion terms include defiance, dissent, disrespect, lawlessness, protest, obstruction, and riot.
5. Purity or Sanctity/Degradation: underlies religious ideals of striving to live in an elevated, less carnal nobler way. The body is seen as a temple that can be debased by immoral activities and contaminants. Examples of purity/sanctity terms include sacredness, modesty, decency, and innocence. Examples of degradation include disgust, indecency, sin, adultery, filth, obscenity, wickedness, and perversion.

A sentence may have more than one moral claim, in which case you need to select and annotate the sentence as many times as the number of moral claims.

Step 3 Specifying Author’s Support or Rejection of the Claim

Once you identify a specific moral claim, you then specify if the **article** author supports or rejects it. For example, you may identify the following sentence as a moral claim based on care: “for many Americans, stem cell research offers the promise of reducing human suffering.” You would code this as agreement with the claim because of the author’s use of the phrase, “many Americans.”

An example of an unsupported claim is “Some people believe that despite its worthy ends, stem-cell research is wrong because it involves the destruction of human embryos. These views are shortsighted.” Here the statement includes a harm claim (destruction of embryos) against stem cell research, but because the author rejects that view as shortsighted, you would code it as rejection of the claim.

If the statement is simply a moral claim *stated by the author herself*, such as in an opinion column, that claim is obviously supported by the author and should be coded as such. If the author is *quoting a moral claim made by someone else*, look in the immediate surrounding sentences to see if the author supports or opposes it. If it is difficult to determine the author’s position, then select NA.

Step 4 Specifying Author’s Support or Rejection of a Policy or Issue

The final coding task is to specify whether the statement explicitly favors or opposes a specific policy or issue in question. If you cannot determine this, select NA (not applicable).

- a. For *immigration* it would be whether the statement favors or opposes immigration reform. The specifics of policies change depending on the period studied (e.g., path to citizenship, legal status for children of unregistered immigrant born in the US—DACA), but the general policy of reform is the same in all cases.
- b. For *same-sex marriage* whether a statement is in support of or opposed to legal recognition of the union of same-sex partners.
- c. For *smoking*, whether the statement favors or opposes restrictions on smoking.
- d. For *racial unrest in Baltimore*, whether the statement holds black residents responsible for the damage and destruction that took place in the protests and riots that took place after the death of Freddie Gray.

First, read each sentence, and if there is a moral claim (step 1), then add annotations at the sentence level (steps 2-4 in the protocol). After you are done with reading the article, decide whether the article as a whole is making a moral claim (step 1), and if it is, select the word “ARTICLE” at the top and add annotations about the overall moral claim in the article.

Step 2

The screenshot shows the Brat NLP interface with a text document titled "/test/0000". The document contains 13 sentences. Several sentences have annotations: Sentence 2 has "Harm (Vice)" and "Care (Virtue)"; Sentence 3 has "Care (Virtue)"; Sentence 11 has "Subversion (Vice)". A "New Annotation" dialog box is open, showing the text "A Set of Borders to Cross; For Children Seeking Immigrant Relatives in U.S., Journey Is Twofold". The dialog box has a "Text" tab, an "Entity type" section with a red box around the "Care (Virtue)" and "Harm (Vice)" options, and an "Entity attributes" section with "Moral claim support: ?" and "Issue support: ?" dropdowns. There is also a "Notes" section at the bottom of the dialog box.

1 "A Set of Borders to Cross; For Children Seeking Immigrant Relatives in U.S., Journey Is Twofold

2 Seventeen-year-old Guillermo Antonio Iraheta is but one drop in a new and fast-growing phenomenon of illegal immigrants living in Northern Virginia. But soon after surreptitiously crossing the border, he was apprehended by the federal government where 136

3 Left behind more than a decade ago by his parents, Iraheta is but one drop in a new and fast-growing phenomenon of illegal immigrants living in Northern Virginia. But soon after surreptitiously crossing the border, he was apprehended by the federal government where 136

4 But soon after surreptitiously crossing the border, he was apprehended by the federal government where 136

5 Iraheta is but one drop in a new and fast-growing phenomenon of illegal immigrants living in Northern Virginia. But soon after surreptitiously crossing the border, he was apprehended by the federal government where 136

6 Authorities say the phenomenon is growing rapidly. Many of those who are apprehended by the federal government where 136

7 Many of those who are apprehended by the federal government where 136

8 There they run up against Washington's policies. The government agency that runs the shelter for the federal government where 136

9 The government agency that runs the shelter for the federal government where 136

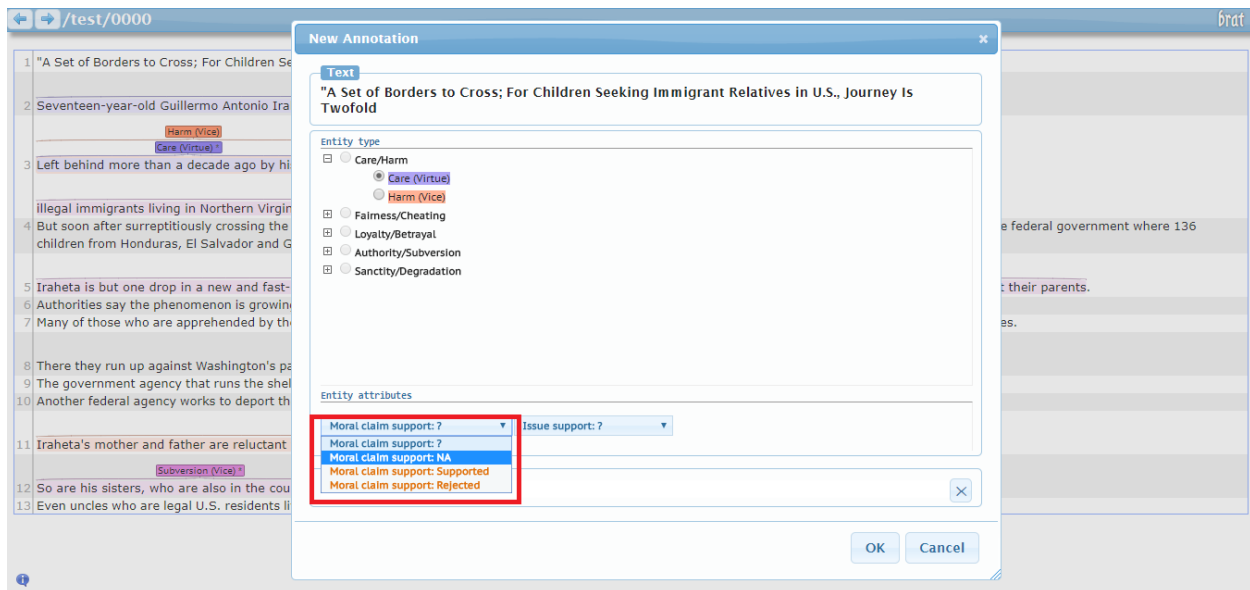

10 Another federal agency works to deport the federal government where 136

11 Iraheta's mother and father are reluctant to let their children cross the border. The federal government where 136

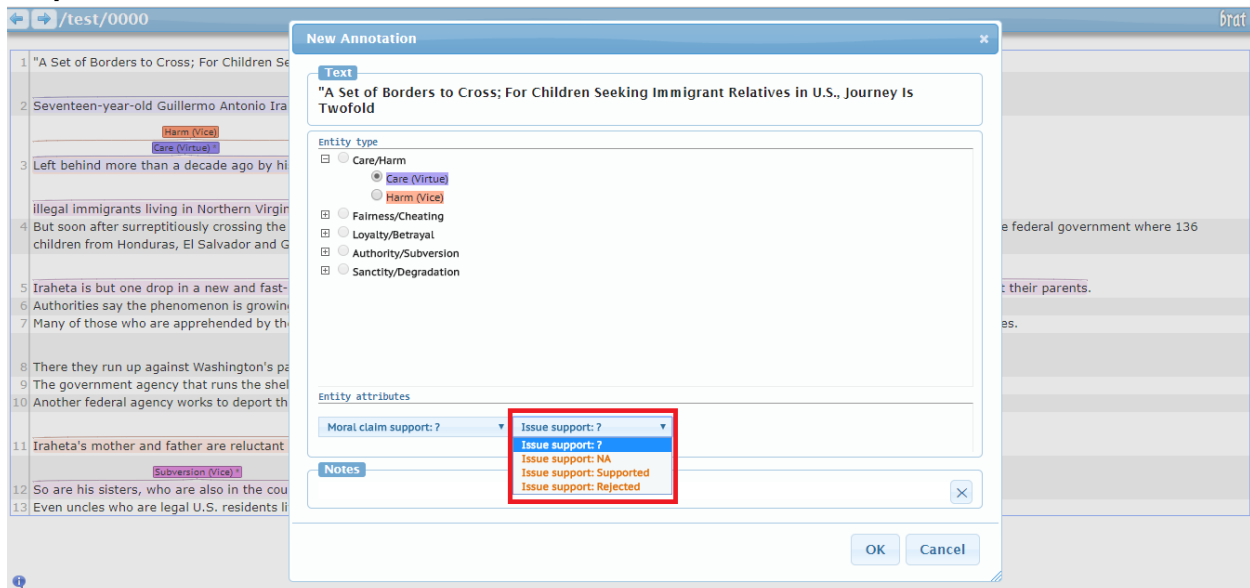

12 So are his sisters, who are also in the country. The federal government where 136

13 Even uncles who are legal U.S. residents live in the federal government where 136
